# Clarity Omnibus Survey

April 2025

**Public version** 

# Methodology

The April 2025 Clarity Omnibus survey was conducted from April 9th-14th\* via national online public opinion panels. 1,008 respondents were matched to the voter file. The margin of error of this poll is +/-1.71% at a 95% confidence interval.

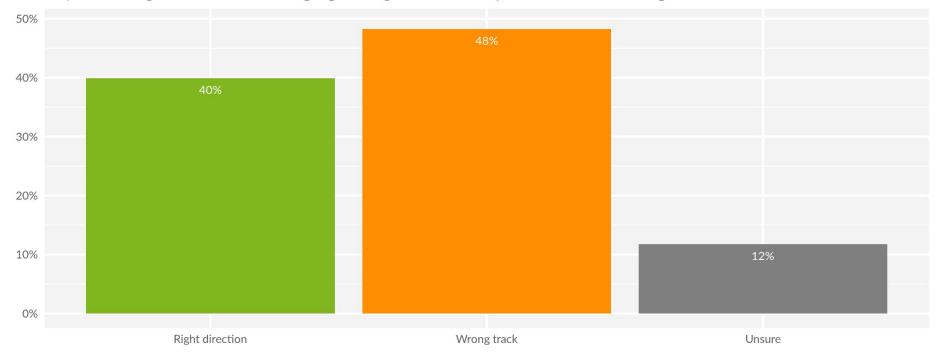

Attention checks were employed in the survey and respondents who failed attention check questions were removed from the sample.

Responses are **weighted to a national universe of <u>registered</u> voters** using factors including age, gender, race, education, and geography. Later in 2025 we will begin weighting to a likely voter universe using our <u>2026g Turnout Model</u>.

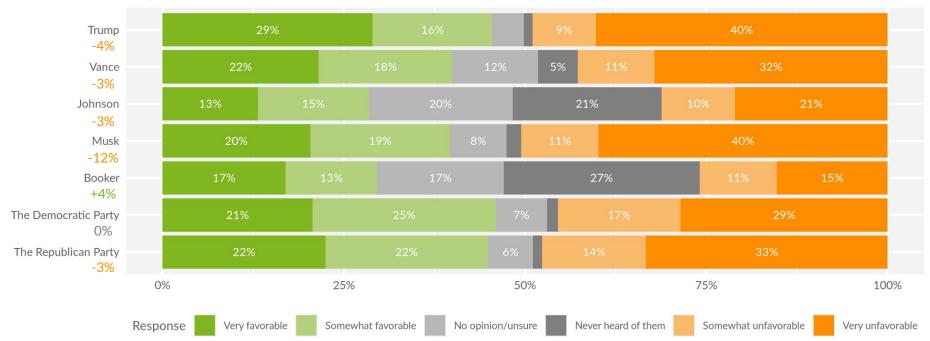

\* The survey started fielding on the evening of Wednesday, April 9th after the Trump tariffs were paused.
